

What is **RADON?**

RADON IS...

...A **RADIOACTIVE GAS.**

...INVISIBLE,
TASTELESS,
& ODOURLESS.

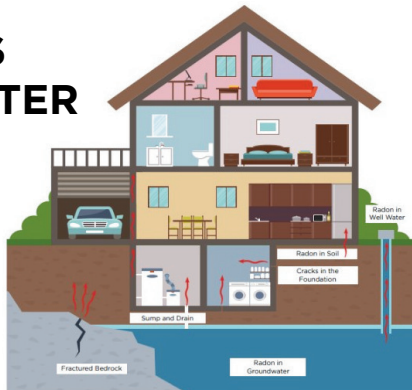

...the **second leading**
cause of **lung cancer.**

...in **all homes**,
and the only way
to know the level
in your home
is to **test.**

HOW DOES RADON ENTER A HOME?

Radon seeps into homes from the ground through cracks & openings in the foundation.

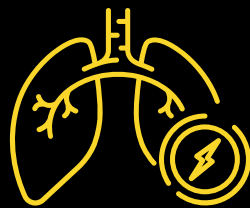

Saskatchewan is a hot spot for radon.

1 in every 3 SK homes has radon levels at or above Health Canada's guideline of 200 Bq/m³.

WHY SHOULD I TEST FOR RADON?

As radon breaks down, it forms radioactive particles that we breathe in.

The particles release energy that can **damage** the cells in **your lungs.**

Over 3,000 Canadians die every year from **lung cancer** caused by radon gas exposure.

ACT NOW!

Use discount code **SKRADON** for **\$5 off** your test!

↓ **Radon** should be **reduced** to be as low as reasonably possible.

Find a Canadian-National Radon Proficiency Program certified mitigator near you who can lower the radon levels in your home.
